## **DETAILED ACTION**

### ***Claim Objections***

1. Claim 9 objected to because of the following informalities: in line 1, “a” should be added after “filter is”. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claim 1, 8-10 and 13 are rejected under 35 U.S.C. 102(b) as being anticipated by the Japanese Reference (JP 10-43513), hereinafter ‘513.

For claims 10 and 13, As shown in figure 1, ‘513 discloses a filter cartridge having end plates and a “pocket” between the folds of a pleated filter sheet (one of which is shown in figure 6). In this pocket a functional part, e.g. pump 8, is positioned. The “notches” in the filter plates necessary to accommodate the functional part is also shown.

Art Unit: 1723

As for claims 1 and 8-9, as shown in figure 1, the cartridge is positioned within a housing having a cover. As shown figures 15 and 16, a tube 104 is positioned in a folded pocket formed between the pleats of the filter cartridge. The opening in the upper filter end plate that the tube is inserted through is considered to be a notch through the upper surface thereof. The filter is a fuel filter for an internal combustion engine.

#### ***Examiner Recommendations***

4. for Allowability of claim 1, the examiner recommends the following changes to claim 1: in line 4, after “ functional part”, “arranged in said housing” should be added and in line 8, after “waster level sensor”, “or” should be replaced with —and—.

For claim 10, in line 5, “folded” should be added before “pocket” and the functional part should comprise both the water level sensor and the suction tube.

Have both the water level sensor and a suction tube in the folded pocket of the pleated filter cartridge is not taught in the art.

#### ***Response to Arguments***

5. Applicant's arguments with respect to the claims have been considered but are moot in view of the new grounds of rejection. This action is non-final.
